

Carbon Pricing and Merit-Order Effects in Day-Ahead Electricity Markets

S. Petrova, J. Novak

Abstract

A causal analysis of how carbon price shocks propagate through day-ahead electricity markets in three interconnected European bidding zones.

1. Introduction

This is a sample manuscript generated for the ErgonXiv demonstration archive. It illustrates how full-text preprints are rendered in the in-browser PDF viewer, downloaded, and assigned a permanent DOI upon publication. The substantive content has been omitted; this document exists to exercise the submission, screening, and publishing workflow end to end.

2. Methods

We describe a sample methodology section here. Data, code, and supplementary materials would normally accompany the deposit. ErgonXiv encourages open data and transparent reporting in line with its community governance policies.
